Acknowledgements

First and foremost we would like to thank all those who participated in this study: the principals who not only agreed that their schools would be part of the study but also set aside time to be interviewed; the teachers who made space in their busy schedules to take part in interviews and provide information about individual students in the study, reorganised their schedules so that we could spend time with students, and were generally very helpful and cooperative in ensuring that we were able to complete all our tasks during between one and three considerable fieldwork visits to their schools. Thanks are also due to the school counsellors who agreed to be interviewed, and to the senior student peer supporters who gave up their study time to talk with us.

We would also like to thank very much the parents who provided feedback about their child and themselves up to four times over the course of the study and who gave consent for their child to participate in the first place. The insights you offered are invaluable and the interest and effort you showed to provide us with so much information are much appreciated.

And of course a very special thank you to all the students in the study, for being so willing to share your views, experiences and ideas with us, and for undertaking four asTTle testing sessions with such good grace (most of the time, anyway)! We really do appreciate it: we enjoyed talking with you and learned a lot. We hope we have done justice to all you shared with us.

We would particularly like to thank Heleen Visser, Manager, Research and Evaluation Unit, and Lynne Whitney, Senior Manager, Research Division for seeing the worth of the study and giving us the time and scope to do the best we could with the rich information given to us by all the participants mentioned above. We appreciate your patience and support.

And especial thanks to Fred Bishop, our Research and Evaluation team colleague, who helped us so much through his work with the students and teachers, through providing insights about what we found, and many other things as well: your input was invaluable and you were a great favourite with the students and other participants! As well, we would like to acknowledge Poia Rewi, Senior Lecturer, Te Tumu, University of Otago, who kindly gave us permission to include his whakatauki at the beginning of Emily’s Story.

And thinking back to the origins of the study, we would like to thank Jacky Burgon, then Manager, Research and Evaluation Unit, and members of the former Teaching and Learning theme team within the Ministry of Education, who helped greatly to get the project off the ground. In particular, credit is due to Maurice Walker, who first came up with the idea that there needed to be ‘something done’ on the transition between primary and secondary schooling. It was also the Teaching and Learning theme team group, supported by Jacky, that commissioned Professor Clive McGee, Richard Ward, Joan Gibbons, and Ann Harlow to undertake a literature review about this particular transition point. Their work has proved to be an invaluable resource for shaping the study and understanding much of the data we collected. We appreciate too early guidance on the study provided by Cedric Croft.

We acknowledge with many thanks the contribution and support of the advisory committee members for the study — Clive McGee (University of Waikato), Cathy Wylie (New Zealand Council for Educational Research), Gary Sweeney and Bill Noble (New Zealand Association for Intermediates and Middle Schools), Ernie Buutveld and Barry Hambleton (New Zealand Principals’ Federation), Judie Alison (Post Primary Teachers’ Association), Bali Haque (Secondary Principals’ Association of New Zealand), Ian Leckie (New Zealand Educational Institute – Te Riu Roa), Steve Benson (then in Learning Policy Frameworks, Ministry of Education), and Jenny Whatman (Schooling Group, and member of the Teaching and Learning theme team, Ministry of Education) — who took such an interest and worked together and shared ideas so collaboratively.

Further thanks are due to Professor McGee, and also many thanks to Professor Terry Crooks (National Education Monitoring Project, University of Otago), for each undertaking to peer review our reports for the study: they are the better for your input.
A big thank you too to our Research Division colleagues, past and present, particularly Stephen Porteners and Steve May for their technical expertise, Christabel Dillon and Raelene Butters for overseeing the design, layout and printing processes, and Lisa Rodgers, Anna Livesey, Jorgette Maaka, Puspa Nana, Jo MacDonald, Ngaire Bennie, Lisa Ng, Hadyn Green, and Helen Harper who took an interest, offered encouragement and provided very helpful input.

Thank you to Lara Syddell who designed, marked and scored the asTTle tests for us at each phase of the study. Her contribution went beyond the call of duty, as although she left New Zealand for a demanding overseas posting part way through the study, in the interests of continuity, she insisted on marking and scoring the final phase tests from abroad, for which we are extremely grateful. Three teachers were also contracted to verify the asTTle writing tests and we gratefully acknowledge their contribution. We would also like to thank Keith Rickard, a Year 8 teacher who kindly agreed to provide his perspective on the suitability of the asTTle tests for our sample of students, and Celeste, Nic, and Nick, then new Year 9 students, who agreed to take part in trial runs of our student interviews.

In addition, we would like to acknowledge the valuable contribution of Sarah Taylor who did an excellent job setting up the data entry screens and ironing out any database problems. Also thanks to the data entry staff who did not always have an easy job deciphering and entering the large amount of qualitative and quantitative data.

And last but certainly not least, a huge thank you to our Auckland fieldwork team: Marie Cameron who led the team, and managed the complexities so well, Janet Mansfield and Hainoame Havea, and Maree Telford, another of our Research Division colleagues, who so willingly and capably carried out all that was asked of them. We certainly couldn’t have managed without the four of you!!

SK, SC
