

## Acknowledgements

A study of this scale and duration requires the commitment and support of many people.

Firstly, we would like to thank the primary, intermediate and secondary schools who took part in our research. We are extremely grateful for their enthusiasm to become involved initially, as well as the support they gave us over the course of the study. They allowed us the freedom to work with the students and teachers as required and made us feel as though we were part of their school for the short time we were there.

The primary focus of our study was to find out how students found the transition from primary to secondary school. We were privileged to work with a wonderful group of students who we enjoyed getting to know over the 18 months of the study. We cannot thank them enough for their willingness to talk with us and to complete the many assessment tasks we asked them to do. We also must thank many of their parents who were interviewed or completed questionnaires for us.

Many teachers were interviewed during the study and also asked to complete student assessment forms. We realise how busy teachers are and appreciated them giving up their valuable time to be involved.

We were fortunate to have Lara Syddell to design, mark and score the aSTtle tests for us. She was extremely interested in the study and in what the results were showing. Unfortunately for us, Lara left New Zealand just as we were beginning our data collection for Phase 4. But instead of having to find a replacement marker Lara insisted on marking and scoring the tests for us in order to maintain consistency, as long as we were prepared to send the assessments to her. It was wonderful to work with such a dedicated and professional person. We are also grateful to Keith Rickard, a Year 8 teacher, who checked the appropriateness of aSTtle tests for our sample of students, as well as the three teachers who were contracted to verify the aSTtle writing tests once the tests had been marked.

Prior to the commencement of the study three then Year 9 students, Celeste, Nic and Nick, participated

in a trial of the student questionnaires, which was much appreciated.

Thanks also to the external members of the study advisory group who readily engaged with the project: Clive McGee (University of Waikato); Cathy Wylie (New Zealand Council for Educational Research); Gary Sweeney and Bill Noble (New Zealand Association for Intermediates and Middle Schools); Ernie Buutveld and Barry Hambleton (New Zealand Principals' Federation); Judie Alison (Post Primary Teachers' Association); Bali Haque (Secondary Principals' Association of New Zealand); and Ian Leckie (New Zealand Educational Institute – Te Riu Roa). We greatly appreciated their feedback on our draft instruments and the worthwhile discussions we had with them around some of our preliminary findings and other aspects of the study. We also acknowledge the contribution of Cedric Croft in the early stages of the project.

Reviews of this report were also carried out by Clive McGee and Terry Crooks (National Education Monitoring Project, University of Otago). Thank you both for your positive and constructive feedback.

The vision and commitment of a number of people within the Ministry of Education ensured this study became a reality and we are very grateful to them for their ongoing support. In particular, we would like to thank Lynne Whitney, Jacky Burgon, Heleen Visser, Lisa Rodgers, Steve Benson and Jenny Whatman. We would also like to thank our colleagues in the Research and Evaluation Team and Nicola Durling from Learning Policy Frameworks who provided comment on the draft of this report, as well as Christabel Dillon and Raelene Butters who co-ordinated the publication process.

Special thanks also to our ex-colleague, Stephen Porteners, who administered some of the student tests for us in Wellington and completed the initial analyses of the assessment data on which this report is based. His technical expertise was invaluable.

Steve May, from the Research Division, provided further technical expertise on how best to work with the huge amount of data we collected and his guidance and support was much appreciated.

In addition, we would like to acknowledge the valuable contribution of Sarah Taylor who did an excellent job setting up the data entry screens and ironing out any database problems. Also thanks to the data entry staff who did not always have an easy job deciphering and entering the large amount of qualitative and quantitative data.

In Wellington, we were fortunate to have a Research Division colleague, Fred Bishop, working with us in the field. Fred was a great asset to the study as the students and teachers responded well to his easy-going manner and were more than happy to share

their experiences with him. It was wonderful to have the opportunity to work more closely with him and we really valued his input and support.

Lastly, but most importantly, we would like to really thank Marie Cameron, Janet Mansfield and Hainoame Havea from Auckland, and Maree Telford, another of our colleagues from Wellington, who undertook the fieldwork for us in Auckland. We appreciated their contribution enormously.

Thank you all very much.

**Sharon Cox and Shelley Kennedy**
