ACKNOWLEDGEMENTS

A number of people have contributed to this study on mathematics and science achievement. First and foremost, my thanks go to the principals, teachers, and students who participated in this study. The time and effort they dedicated to the completion of the questionnaires and tests was greatly appreciated.

My thanks is also extended to the members of the national advisory committee who provided helpful advice and assistance at various stages of the study.

To Steven May, Megan Chamberlain, Glenn Chamberlain, Vicki Martin, and Karl Udy, my thanks to the professionalism they showed in carrying out the tasks associated with the study, and its completion. Thanks also to Robyn Caygill — for her role in the administration of the Performance Assessment component of the study — and to past members of the IEA Unit — Gerald Dreaver, Richard Moreham, and Alison Atkinson, and to members of the Research Unit for their assistance during the study.

I would also like to thank Bob Garden for the editing of this report and his valuable advice to the authors.

Finally, special thanks is extended to Christabel Dillon for standardising formats, deciphering many edits, and her work on the layout and production of this report.

Hans Wagemaker
National Research Coordinator
